

# QUICK STANDS

## Reduce ground time and costs

### Introduction

CPH has reconfigured a number of stands into “Quick Stands” – a faster, more efficient way to reduce turnaround time for aircraft, limit the likelihood of delays and potentially shorten the overall ground time.

Quick Stands enable passengers to make use of the air bridge at the front and a staircase at the rear end simultaneously, greatly speeding up the boarding and disembarking process. People using the staircase are safely directed to the terminal entrance.

To support the faster turnaround times, Quick Stand boarding gates are also equipped with self-service boarding exits.

### Details

The rear stairs are purchased by CPH and can be rented for approx. 42dkr/stair/turnaround.

Quick Stands are already available on many of our short-haul stands and more are planned in the coming years.

The service is available in selected gates:

A20, A18, A14, A12, A8, A6, A4, B9, B8, B7, B6, B5, B3, D3 and D2.

## FACTS

- Possibility for shorter ground time (less than 30 min.)
- Higher efficiency and punctuality
- Lower your Total Cost of Operation
- Mitigate additional costs associated with flight delays
- Optimise use of crew and ground staff
