

Training Object address:

- CPH / RFF training site in the South.

Training Object Capabilities/Limitations:

- Smoke diving exercises
- Aircraft entry training
- Positive pressure ventilation exercises
- **No heat-based exercises are allowed in the object**

Marking Options:

- Use of smoke machine
- Placement of rescue dummies
- Use of positive pressure ventilator
- Placement of role players when smoke machine is not used

Emergency Exits/Escape Routes:

- Escape routes are via fixed stairs in the front section of the aircraft.

Safety Team:

- Instructor maintains contact and supervision of participating trainees and is ready to clearly interrupt the exercise in case of an unintended incident.
- Instructor ensures sufficient resources are available so that a safety team can initiate action in case of an incident.
- In case of smoke marking and an accident, the instructor initiates ventilation by pressing the "emergency stop," which activates the object's ventilation system.

Protective Equipment:

- During exercises, participants must wear intervention suits, helmets, and gloves.
- Full respiratory protection must be used by all during smoke marking.

Relevant Industry Guidelines Available Electronically at CARFA:

- "Personal Protective Equipment"
- "Safety in the Use of Ladders"
- "Safety and Health During Exercises"
- "Guidelines on Personal Safety in the Use of Fire Training Objects"

First Aid and Resuscitation Equipment:

- Located in the administration/changing pavilions, just inside the main entrance.

Accident and Alarm Procedures:

- Alarms are raised by the instructor via phone to OC at 32312000 or via SINE radio to OC.

Preparation / Review Before Using the Training Object:

- Smoke diving instructor is responsible for conducting the exercise
- Identification and function of emergency exits
- Ensuring safety barriers at openings/doors to prevent falls are present and in use
- Identification and function of smoke marking interruption, including location of emergency stop
- Ventilation options, including positive pressure ventilator if necessary
- Identification of first aid equipment location
- Alarm options
- Ensuring all participants use required protective equipment such as: helmet, gloves, intervention suit, and smoke diving apparatus

Reporting Safety Deficiencies in the Object:

- The responsible instructor is contacted and assesses whether the object is safe to use
- Report deficiencies to CARFA administrative personnel, who will log the issue

Reporting Injuries / Near-Miss Incidents:

- Procedure D4 "Reporting of Work Injuries" is followed for CPH employees
- Form "Internal Report of Work Accident" is completed for CPH employees
- Employees from other companies must report injuries to their own employer
- Immediate supervisors of those involved are informed
- Duty incident commander is informed
- Safety representative is informed
- In case of serious accident, AMI is contacted by phone
- In case of "Near-Miss Incident," the nearest supervisor is contacted to investigate the incident and prevent future occurrences
