

### **Training Object address:**

- CPH / RFF training site in the South.

### **Training Object Capabilities/Limitations:**

- Access exercise using various external fire scenarios
- Smoke diving exercise in the cabin with entry through cabin doors, overwing exit, and fixed staircase
- Entry into cargo compartment
- Fire scenario inside the cabin

### **Marking Options:**

- Use of fixed smoke machine for internal/external smoke simulation
- External and internal fire scenarios
- Placement of mannequins
- Placement of "Dangerous Goods" in cargo compartment
- Simulated flashover
- **NO REAL PERSONS MAY BE USED AS ACTORS IN THE OBJECT**

## **Emergency Exits/Escape Routes:**

- Escape routes are via fixed stairs at the rear of the aircraft and out onto the wing.

## **Safety Team:**

- Instructor maintains contact and supervision of participating trainees and is ready to clearly interrupt the exercise in case of an unintended incident.
- Instructor ensures sufficient resources are present to initiate emergency response if needed.
- In case of smoke simulation and an accident, the instructor initiates ventilation.

## **Protective Equipment:**

- During exercises, participants must wear intervention suits, helmets, and gloves.  
During fire and smoke simulation, full respiratory protection must be used by all.

## **Relevant Industry Guidelines Available Electronically at CARFA:**

- "Personal Protective Equipment"
- "Safety in the Use of Ladders"
- "Safety and Health During Exercises"
- "Guidelines on Personal Safety in the Use of Fire Training Objects"

## **First Aid and Resuscitation Equipment:**

- Located in the administration/changing pavilions, just inside the main entrance.

## **Accident and Alarm Procedures:**

- Alarms are raised by the instructor via phone to OC at 32312000 or via SINE radio to OC.

## **Preparation / Review Before Using the Training Object:**

- Smoke diving instructor is responsible for conducting the exercise
- Identification and function of emergency exits
- Ensuring safety barriers at openings/doors to prevent falls are present and in use
- Identification and use of emergency stop that interrupts scenarios and activates ventilation/lights
- Identification of first aid equipment location
- Alarm options
- Ensuring all participants use required protective equipment such as: helmet, gloves, intervention suit, and smoke diving apparatus

## **Reporting Safety Deficiencies in the Object:**

- The responsible instructor is contacted and assesses whether the object is safe to use
- Administrative personnel at CARFA report the object as defective

## **Reporting Injuries / Near-Miss Incidents:**

- Procedure D4 "Reporting of Work Injuries" is followed for CPH employees
- Form "Internal Report of Work Accident" is completed for CPH employees
- Employees from other companies must report injuries to their own employer
- Immediate supervisors of those involved are informed
- Duty incident commander is informed
- Safety representative is informed
- In case of serious accident, AMI is contacted by phone
- In case of "Near-Miss Incident," the nearest supervisor is contacted to investigate the incident and prevent future occurrences
